Conclusions {#cesec70} ========== The PrNTO is a simple diagnostic tool that can be applied quickly and efficiently in the emergency department to identify conditions of acute infection. As patients with these infections have significant mortality rates, early and accurate diagnosis is vital to clinical outcome. The PrNTO is a practical way of rapidly assessing patients and can be performed at the bedside. We have demonstrated the efficacy and speed of this tool in the emergency department, and we propose that the PrNTO is a safe, quick and effective way to identify acute infection in the emergency department. *Provenance*: Commissioned; not externally peer reviewed. A macro that contains multiple expressions in a single statement. By placing multiple key symbols with macros, a statement can be designed as if it were a single, stand-alone expression. KEYPAIR Description: A pair of key symbols that can be used in a macro. Key symbols are used to quickly identify or replace data across a variety of scenarios. Key symbols are stored in a pair so that they can be used to quickly find or replace values. Key expression Description: A macro containing the result of a simple expression. An expression may be preceded by a key symbol and a key symbol pair to quickly identify or replace multiple values. Key expressions are stored in pairs so that they can be used to quickly find or replace multiple values. Key symbol Description: A symbol that can be used to quickly identify or replace multiple values in a macro. Key symbols are stored in pairs so that they can be used to quickly find or replace multiple values. Logical Union Description: A simple Boolean expression used to check a number of conditions at once. Logical OR Description: A logical OR operation is performed on two or more expressions. An OR operation evaluates to true if any one of the operands evaluated to true. Logical AND Description: A logical AND operation is performed on two or more expressions. An AND operation evaluates to true if all of the operands evaluated to true. Logical NOT Description: A logical NOT operation is performed on a Boolean expression. A NOT operation evaluates to true if the original expression evaluated to false. Comparison Description: A comparison operator. The comparison operators you can use depend on whether you are comparing numeric, text, or dates. These operators are associated with specific comparison types. Numeral or Numeric Operator Description: Used to compare two numbers or dates. Text or String Operator Description: Used to compare two strings. Date or Datetime Operator Description: Used to compare two dates or datetimes. Date or Datetime Expression Description: A date or datetime expression that can be used as a conditional statement. Date or Datetime Expression Description: An expression containing a date or datetime used to compare a condition to a defined range. Conditional Operator Description: An operator that evaluates to true or false based on a condition. For example, if the condition is true, the result of the expression is true. If-Then 1d6a3396d6

Embarcadero DB Optimizer is an embedded SQL IDE for developers and DBAs to optimize SQL data using an intuitive GUI. The main characteristics of Embarcadero DB Optimizer are: An IDE to produce all SQL data profiling and tuning techniques. A simple, yet powerful dashboard tool to allow for a basic analysis of all SQL profiled data. Powerful automation tools to allow a DB professional to effortlessly produce all SQL tuning functions needed to diagnose, examine, and optimize SQL data within their own databases or apps. A custom module for creating SQL tuning functions with the same ease of use as the reporting tool. A single button interface to allow a DB professional to produce all SQL tuning functions needed to diagnose, examine, and optimize SQL data within their own databases or apps. SQL Monitoring Embarcadero DB Optimizer is aimed to provide a comprehensive monitoring tool for SQL profiling. It allows you to easily collect data for SQL profiling and monitor the results through visualizations on a single dashboard. Besides, with Embarcadero DB Optimizer you can easily create your own custom SQL profiling and tuning functions. Features: Advantages: Visualizations of the SQL data collected with Embarcadero DB Optimizer allow you to easily recognize and improve data issues with no time-consuming SQL reports or graphs. A single dashboard makes it easier to examine SQL data in a clear and organized way. Because Embarcadero DB Optimizer runs on SQL Profiler objects, it can directly collect data from any SQL instance (including SQL Server and SQL Azure) without needing to use other tools. It also allows you to easily integrate Embarcadero DB Optimizer into other tools such as: MSSQL Management Studio - to simplify and streamline SQL data collection and investigation. Access - to use Embarcadero DB Optimizer as a mobile app. SQL Server Profiler - to easily collect data from SQL Server. Fusion Database Server - to use Embarcadero DB Optimizer as a mobile app. A simple interface makes the process of creating SQL profiling and tuning functions easier. It also allows you to create your own SQL tuning functions by using built-in functions or existing ones. The Dashboard that you can see in Embarcadero DB Optimizer is customizable for your business. This dashboard is made to easily identify SQL issues and suggest strategies to improve performance. Data are presented with charts and graphs. The charts and
