Contents History Autodesk has been developing AutoCAD Product Key since the early 1970s. When CAD started, computers were bulky, noisy, expensive, slow, and insecure. Graphics, on the other hand, were readily available, fast, and inexpensive, thus providing an opportunity to market CAD software. In 1972, Autodesk created its first CAD product, Graphics Computer System (GCS). GCS was an integrated CAD/graphics package which was primarily designed for use in desktop computers with built-in graphic display devices (like the IBM 370) and a mainframe computer (like the IBM AS/400) as the CAD processor. This was a radical departure from the mainframe CAD packages which were usually run on a separate graphics workstation, with a "mainframe operator" (MCO) working at a terminal connected to the mainframe. Autodesk soon acquired a number of small, independent CAD package vendors and integrated their products into AutoCAD Serial Key. This caused a major upheaval in the company. Many Autodesk employees left to start their own companies and many smaller companies with independent CAD products were acquired by Autodesk to become part of Autodesk. This terminal, known as the Autodesk Graphic Computer (AGC) was designed to provide the best possible performance on the 386DX microprocessor. It also enabled multiple users to use AutoCAD simultaneously. It was the predecessor to the Autodesk 3D Design. 1990 – RTCW for the mainframe – RTCW for the mainframe 1991 – Toolbox for the mainframe – Toolbox for the mainframe 1992 – Alpha version of AutoCAD for the PC – Alpha version of AutoCAD for the PC 1993 – AutoCAD LT for the desktop – AutoCAD LT for the desktop 1994 – AutoCAD for the AS/400 – AutoCAD for the AS/400 1995 – AutoCAD Network Edition for the desktop – AutoCAD Network Edition for the desktop 1996 – Accel @ Work – Accel @ Work 1998 – Accel for the mainframe – Accel for the mainframe 1999 – AutoCAD for the PC – AutoCAD for

Software versions of AutoCAD are also available for various platforms, most recently including support for the Apple macOS version 10.9 (Mavericks), released in October 2014, and has introduced a major revision in the overall architecture of the operating system, the Darwin kernel, and the XNU component of the macOS operating system. Hardware and computing platforms Autodesk products are available for the following computing platforms: Macintosh OS X Microsoft Windows Linux and UNIX As of September 2014, more than 120 million active licenses of AutoCAD and other Autodesk products have been sold, with hundreds of millions of users worldwide. In the United States, AutoCAD was one of the first computer-aided design (CAD) software products available to the general public. It is available for a variety of platforms and operating systems, including PCs, Macs, iOS and Android devices, workstations and networked devices. Product line Autodesk AutoCAD is the flagship product from Autodesk. The product line is divided into the following areas: 2018 product release New features were announced at the 2018 Autodesk University Conference. A: If you want to export to flat file format, and keep your document blank, you can use the command below: F3 Save as.dwg This will create a blank DWG file in the desired location. For more info check the Autodesk help document: Evaluation of the effectiveness of prophylactic carbapenem therapy on infectious complications in a cohort of burn patients. Bacterial infection is an independent risk factor for mortality in burn injury. Prophylactic antibiotic therapy is the cornerstone of the management of burn injury. Carbapenem prophylaxis is preferred. A retrospective cohort study was conducted to assess the effectiveness of carbapenem prophylaxis in reducing infectious complications. In the period from December 2009 to December 2012, a total of 90 burn patients (male : female = 1:1.1) at the Burn Centre of the Mahavir Hospital, Jodhpur, India were randomly selected for carbapenem and non-carbapenem prophylaxis groups. Primary outcome was frequency of infection. Secondary outcomes were episodes of infection, incidences of colonization and mortality. Baseline demographic data were comparable in both the groups. The infection incidence was 6.2% (2/33) in the carbapenem group and 21.2% (7/33) in the non-carbapenem group. The difference was statistically significant (p-value = 0.03). The incidence of colonization in the two groups was similar. Mortality was
