

Free images can be found in some online resources that are searchable using a technique called Google Image Search. Look for images that are not copyrighted, that are relatively clean, and are in color. For example, look for images that have a dot rather than a line in the upper right-hand corner of the photo. A dot indicates that it's free for any use. Examples of available stock images are located online through sites such as: • Stock.XCHNG: search for stock images using keywords, such as animal, birds, human, nature, nature, underwater, and more. • www.sxc.hu/: search for stock images using keywords, and also see the **\*\*dreamstime\*\*** collection. • : search for stock images using keywords and image tags to identify whether an image is copyrighted.

New York (CNN Business) Universities are responding to the new coronavirus by recommending that students avoid studying for any part of the fall term, and by taking steps to prevent the spread of the disease. On Monday night, the United States removed Australia's Ryan Scott from a flight to New York after the Australian government said it had given him coronavirus. Scott had tested positive for the virus. After that, universities from around the globe followed suit. In the coming weeks and months, the virus will eventually go global. Rutgers University said Tuesday that all on-campus exams for the fall term have been canceled, and that students will be able to continue grading, but not take final exams. College students will continue to have access to course materials, but will not be graded.

Q: Problem reading float data from a stream I have some float data that I load from a binary stream. I'm currently using the following code to read the data in, but the floats come back as all 1's or all 0's. I was hoping to use float.Parse() to see if I can read the data correctly, but it's not giving me the right data back. I think this is a problem with the bit order on the stream though, I'm kind of new to binary. Any ideas?

```
Public Sub Data()
    Dim Source As New DataInputStream(New FileStream("filename.dat", FileMode.Open, FileAccess.Read))
    Dim Output As New FileStream("newfilename.txt", FileMode.Create, FileAccess.Write)
    For i As Integer = 0 To Source.BaseStream.Length - 1
        Output.Write(Source.BaseStream.ReadByte())
    Next
    Source.Close()
    Output.Close()
End Sub
```

A: You need to swap the order of things:

```
For i As Integer = 0 To Source.BaseStream.Length - 1
    Output.Write(Source.BaseStream.Read())
Next
```

**Iranian Jews History of Iranian Jews** From the Persian Empire to modern day Iran, Jews have been in the Middle East for over 3,000 years. Iran has the oldest record of Jewish existence. While the Persians are recorded as having exiled the Jews out of the region in the 5th century BCE, in the 18th century CE, Parsis, also known as Persian Zoroastrians, discovered a record of a Jewish presence in their region. The Parsis were responsible for many of the current recorded Jewish communities in modern-day Iran and are the region's only ethnic Persian Jews. Since the close of World War II, Jews have formed the majority of Iran's Jewish population. Population of Iran's Jews Iran's Jewish population is the largest in the Middle East. Estimates of Iran's Jewish population range from 500,000 to 1,500,000. The vast majority of Iranian Jews are Persians. The other most prevalent ethnic groups are: Armenians (20,000), Takikis (15,000), Luris (14,000), Kurds (12,000), and Turks (10,000). Although in the last century, the Jewish population has declined, the Jewish community has continued to grow since the 1950s as a result of immigration from Israel, increased marriage between Jews and Persians, and conversion to Judaism. There are an estimated 4,000 Jews in Israel and since the Jewish exodus from Iran in the early part of the 20th century, Israel has become the sole destination for Iranian Jews. Today, most Iranian Jews belong to the Sephardic tradition. However, there are also communities of Persian Jews who observe the Shī'a, a heterodox form of Shia Islam. During the 20th century, many Iranian Jews converted to Christianity, mainly as a result of persecution by the regime. Iranian Jews today Since the end of the 1980s, Iranian Jews have made important contributions to Iran's intellectual community. They have also continued their traditional academic pursuits of writing, poetry, and painting. While there are no Jews who hold public office in Iran, many have become members of parliament, and others have held high-ranking positions in government and the intelligence service. Most Iranian Jews continue to identify as Persian Jews, and a sizable percentage of Iranian Jews
