QuickHide is a small-sized and portable piece of software with a very simple mission: it immediately hides all windows, along with the quick launch and notification area buttons once you trigger a key on the keyboard. Similarly it can bring them up again to put all elements in the original location. The app does not feature any kind of options or configuration settings. Instead, it applies the "what you see is what you get" principle. Use hotkeys to

hide/show all windows and icons

There are two keys designated for hiding and making everything visible again, namely Ctrl and Shift, respectively. Unfortunately, they cannot be changed, which is troublesome when attempting to carry on with normal activity on the computer, especially if you're a fan on keyboard shortcuts in general, since the Ctrl and Shift keys are part of most global hotkeys, and QuickHide overrides them. View the app in Task Manager only The good news is that the program is not

visible anywhere on the screen. It does not create a shortcut on the desktop or in the system tray area. Its process may only be observed in Task Manager, from where it can be terminated as well. For those looking to become stealthy regarding their PC activity, QuickHide could be of service, but it's not that useful if you're accustomed to resorting to hotkeys for basic commands. Performance results CPU and RAM consumption is minimal, so the tool does not put a strain on the overall performance

of the computer. It had a great response time and did not trigger Windows to hang, crash or pop up error messages. Portability benefits Since installation is not an issue, you can simply drop the program files in any part of the hard disk and directly run the executable file, as well as save QuickHide to a USB flash drive or similar storage unit, in order to run it on any PC with minimum effort and no previous installers. What's more, it does not modify Windows registry settings or create extra tools on the disk,

leaving it clean after removal. Our thoughts: Overall this is a great piece of software that is suitable for novice PC users or those who are not familiar with keyboard shortcuts and hotkeys, since it does not change the default behaviour of Windows and only affects the windows that are currently active. Although it was designed for Windows XP, it is fully compatible with Windows 7 and 8, but you'll get smaller performance results if you use the latter. I found it pretty useful when I was constantly keeping windows or terminal windows open and had to see what program is currently working for me and maybe get distracted. But recently I discovered a better and easier way to achieve that, and after some read around, I found 'Hide all' command in BASH which does exactly what I was looking for. I don

Not so much. The app could be improved if one of the hotkeys was made programmable, so that you could tie to additional programs.

Alternatively, the program would be better if it allowed changing the app preferences or add buttons, as well as disabling the app as a whole. The Bottom Line QuickHide is not the most sophisticated tool that we've ever tested, but it gets the job done - and in a
