or truncate? If the field is an exact decimal, round may be better than truncate but if it is close to ±0.0000001, truncate seems to be

the best option, but I do not know if that is really the case. A: Round will give you an accurate result (in terms of when the bit-level precision ends), while truncate will

give you a non-accurate result, in most cases, ie. often at the midpoint between the nearest two integer. To quote Wikipedia: Truncating may be seen as

rounding to the nearest even integer.… Truncating can also mean removing all bits with a value of zero.… Truncating produces results that should be,

as a rule, either integer or fractional as in the IEEE floating point numbers specification. Eyeglasses, such as those shown in U.S. Pat. No. 4,721,508 are
