Recently, many news outlets have reported about Elon Musk's cryptocurrency development company Open AI, the recent crypto boom, and a recent new cryptocurrency mining chip called the "Saphyr chip". Recently, an anonymous developer has just released a new \$500M crypto mining program called "Synoo" for Ethereum. "Synoo is a new program that we released a few days ago, \$500 million worth of processing power," said the developer in a Discord chatroom. The anonymous developer claims that Ethereum was the biggest target of hackers, saying that they have mined roughly \$15 billion worth of Ethereum, and that they will soon start mining for another coin called "Cosmos". In addition, "Synoo" aims to be the biggest Ethereum mining program of all time. The developer started with 2,000 GPU mining rigs, with each rig having 5,000 cards – an expected wealth of \$12 million in cryptocurrency. However, the program's response time, which is defined as the amount of time between when a request for mining is made and when the coin is mined, was over 40 minutes. That being said, the program was supposed to slow down in order to have more mining rigs in the future. Despite the massive delay, the anonymous developer claimed that the costs of the mining "was pretty cheap". Synoo's delay did not stop the community from praising the program, with one commentator stating that "Synoo will be the most expensive project ever". In addition, one of the best Ethereum mining programs, Sapphire, is being criticized as being no longer supported and that it is not profitable to use. According to the latest statistics, Ethereum has dropped by almost 50% since its all-time high. On the other hand, its Hash Rate has increased by 300%, which is an increase of 1,000%.
