The answer for dcaf1 # 3 is. the answer for dcaf # 3 is. the answer for china # 5 is.Q: How to send and response from controller to the view AngularJS? How can I perform send a response to a view when user submit the form. With Jquery I can to do that, but how to do it with Angular JS. A: In general you should be able to do that as long as your "submitting" is not asynchronous. E.g. when you do a POST, put your logic in the POST action, not in the default success or failure action. The general idea goes like this: `$scope.submit = function () { // do your submission logic $http.post('/url', { param1: value1, param2: value2 }) .success(function (data, status, headers, config) { $scope.whatever = data; //... } .error(function (data, status, headers, config) { //... }); };` Suspension circuits are used in integrated circuits as a mechanism to delay an operation of a logic device. More specifically, the suspension circuit is electrically connected to one of a plurality of logic devices, e.g., a memory device, and the suspension circuit buffers or delays the operation of the other logic devices that are electrically connected to the logic devices to which it is electrically connected. Once this other logic device has been delayed or buffered, it is necessary to suspend this operation until the operation of the logic device to which it is electrically connected is required again. As is known in the art, delay circuits are used in integrated circuits to delay or delay an input signal. Most integrated circuit designers try to prevent the delay circuit from compromising the switching characteristics of the logic devices (e.g., 595f342e71
