---

Basic Photoshop 9. Photoshop Elements 10. Photoshop vs. Photoshop Elements 1. Introduction to Photoshop There is no reason not to learn Photoshop. It is a powerful and feature-rich program that most designers use and love. Its basic features will give you a lot to work with right out of the box, and are a great foundation for learning advanced features. You can learn Photoshop by practicing, or by watching tutorials. The former can take a long time and only increase your skills and experience, while the latter are short cuts. Start with no

---

reason not to learn this powerful software. 2. What is Photoshop? Photoshop is a powerful image editing program which is similar to Adobe Illustrator. At the very least, you'll need to familiarize yourself with its basic features. Learn to use the features inside and out. Photoshop provides amazing creative freedom. There are a variety of ways to manipulate the shape, color, and appearance of any photograph or graphic. Most of the features are in the same place in Elements and Photoshop. 3. Photoshop Elements and Adobe

---

Photoshop The biggest difference between Photoshop and Photoshop Elements is the interfaces. Elements' interface is similar to the interface of Microsoft Office; Elements is a database-driven tool that places pictures in the toolbox. You can manipulate any element in the box using the tools and effects. The Elements interface uses tools, options and effects that were created for the specific purpose of editing photographs. These tools are arranged to specifically work with the types of tools and files that photographers use. Most photo

---

editing is a breeze because Elements has so many tools. The most important feature in Elements is its Organizer which gives you quick access to all your photos. It allows you to organize your pictures by device, date, etc. Adobe Photoshop is a professional, feature-rich version of Photoshop. Elements is mainly a graphic design tool for hobbyists and photographers. Photoshop has many powerful graphic design tools. It contains most of the features of Elements.

## Why Learn Photoshop

Why would you learn Photoshop if you're not

---

planning to use it professionally?

The biggest reason to learn

What's New in the?

Q: Change global variable with button I am trying to a different image every time I click on the button and I am trying to do this using a global variable, I currently have the following code. I am creating a new variable named userIcon to do this which is in MainActivity.java. It is being

---

declared in the onCreate() method.

```
userIcon =  
this.imageView.getDrawable();  
userIcon.setColorFilter(this.getResources().getColor(R.color.blue),  
PorterDuff.Mode.MULTIPLY); I  
then create a function that gets the  
user Icon. private void  
changePicture() { userIcon.setColor  
Filter(this.getResources().getColor(  
R.color.green),  
PorterDuff.Mode.MULTIPLY); I  
have a click listener that then  
updates the variable.  
button.setOnClickListener(new  
View.OnClickListener() { public
```

---

```
void onClick(View view) { userIcon
.setColorFilter(this.getResources().g
etColor(R.color.green),
PorterDuff.Mode.MULTIPLY); }
```

}); But when I am testing it, it changes the color of the image but doesn't replace the image. Any advice on how to do this? I am running this in Android Studio 1.3.2

A: @user2407058, you could always use an ImageView's setImageResource() function to replace the image. If you want it to be more generic, I'd suggest the use of a public variable that's always changed. public int picture; then, on

---

click, update the value like this  
picture = new  
Random().nextInt(100); imageView.  
setImageResource(picture); New
