

Related: As you browse the Web, your computer sends requests to multiple websites. When the host servers you request data from, there's the chance your computer will send them an infected email attachment. You think "what do I care about all these emails from all these places?" Think again. For starters, you could be opening up your computer to an elaborate cyber scheme. Hackers all too often use social engineering to get people to open malicious attachments. Victims think they are simply receiving an email from a friend, cousin, or business associate. If you do, you may trigger an attack by opening the attachment. If the email is really from someone you do know, you can use some of the rules below to check it out before opening the attachment. Attackers commonly use infected files with JavaScript, viruses, and spyware. Instructions for Common File Types When you are downloading or opening an unknown file, it will often pop up "open or save" boxes. Try to avoid clicking. If you do, you may be opening an infected file. Windows users can use the Windows File Safety tool to get an itemized list of alerts. Consider using a file validator. Many good open source checks are available for downloading files. See the following resources: Check an attachment with anti-virus or anti-spyware software. There are good free anti-virus and anti-spyware programs out there. They can help you by scanning and removing malicious files. How to Check Email Attachments There are basically two ways to do this: Scroll down to the bottom of the message. Check the bottom of the page. The address should be in the footer. If the message is from someone you know or an organization that you might trust, or if it's part of a social event you are attending, you can open it. However, if it's from a person you don't know or someone that causes you discomfort, don't open it. This technique is the best way to identify which ones are safe. However, if you are not sure, you can check them against all of the best free computer security software. Protect Yourself From Being Attacked To ward off the possibility of opening malicious attachments, always: Do not open attachments from people you don't know, or

[Influence of montelukast on airway inflammation in asthmatic patients]. The protective effect of the oral leukotriene-receptor antagonist (LTRA) montelukast on airway inflammation in asthmatic patients is not very clear. To study the effects of oral montelukast on airway inflammation in asthmatic patients and its influence on daily dosage of inhaled corticosteroids. Cross-sectional study of a cohort of asthmatic patients with moderate-severe persistent disease and a follow-up over a treatment time of 12 weeks with oral montelukast, inhaled corticosteroids and both of them. Evaluation of the influence of montelukast on the fractional concentration of exhaled nitric oxide (FeNO) in patients with different changes in inhaled corticosteroid doses. A total of 22 asthmatic patients (3 female, 19 male) with a mean age of 47.6 years (23-67) and a median of 2 (1-5) years of disease were included in the study. Mean FEV1 after the follow-up time was greater than 80% of the predicted value, with a median of 80%. All patients required a single maintenance dose of inhaled corticosteroids (median of 400 microg/day of fluticasone). The median dose of montelukast was 10 mg/day (range 5-20). The fractional concentration of exhaled nitric oxide (FeNO) decreased at the end of treatment in all patients (median of 4.63 to 1.29 p=0.0001) and increased when there was a decrease in inhaled corticosteroids (p=0.035). Inhaled montelukast is effective in decreasing the airway inflammation in moderate-severe persistent asthmatic patients. Submitted by Tony Clifford via OilPrice.com, Let me say a word about the media. The vast majority of the media, especially the US media, have been dead wrong on Russia. After all, in March they said the war was over. They were eating crow right up until the time the Russian intervention started. And now? You could have knocked me over with a feather when I heard from my friend Bruce Riedel, the scholar who knows Russia and wrote a book on the 1991 failed coup d'etat. He said that an invasion was going to happen within hours and that the Russian
